P.O. Box 145801
Salt Lake City, Utah 84114-5801

RE: APD Amendment

#### Dear Diana:

Since submission of the Federal 14-19-6-21, the location proposed location had to be moved as per the request of the Surface Owner. Enclosed in a new top form page of the APD and a new plats. The Surface Use Plan has been amended as well to reflect these changes. The remainder of the APD will remain the same.

Sincerely,

Mandie Crozier

Regulatory Specialist

### **ONSHORE ORDER NO. 1**

#### **DRILLING PROGRAM**

#### 1. GEOLOGIC SURFACE FORMATION:

Uinta formation of Upper Eocene Age

#### 2. <u>ESTIMATED TOPS OF IMPORTANT GEOLOGIC MARKERS:</u>

Uinta 0' - 3,890' Green River 3,890' TD 7,740'

#### 3. <u>ESTIMATED DEPTHS OF ANTICIPATED WATER, OIL, GAS OR MINERALS:</u>

Green River Formation (Oil)

3,890' - 7,740'

Fresh water may be encountered in the Uinta Formation, but would not be expected below about 350'. All water shows and water bearing geologic units shall be reported to the geologic and engineering staff of the Vernal Office prior to running the next string of casing or before plugging orders are requested. All water shows must be reported within one (1) business day after being encountered.

All usable (<10,000 PPM TDS) water and prospectively valuable minerals (as described by BLM at onsite) encountered during drilling will be recorded by depth and adequately protected. This information shall be reported to the Vernal Office.

Detected water flows shall be sampled, analyzed, and reported to the geologic & engineering staff of the Vernal Office. The office may request additional water samples for further analysis. Usage of the State of Utah form *Report of Water Encountered* is acceptable, but not required.

The following information is requested for water shows and samples where applicable:

Location & Sampled Interval Date Sampled Flow Rate Temperature Hardness pН Water Classification (State of Utah) Dissolved Calcium (Ca) (mg/l) Dissolved Iron (Fe) (ug/l) Dissolved Sodium (Na) (mg/l) Dissolved Magnesium (Mg) (mg/l) Dissolved Carbonate (CO<sub>3</sub>) (mg/l) Dissolved Bicarbonate (NaHCO<sub>3</sub>) (mg/l) Dissolved Chloride (Cl) (mg/l) Dissolved Sulfate (SO<sub>4</sub>) (mg/l) Dissolved Total Solids (TDS) (mg/l)

#### 4. PROPOSED CASING PROGRAM

a. Casing Design: Federal 14-19-6-21

	INTERVAL					DESIGN FACTORS		
SIZE	TOP	втм.	WT.	GR.	CPLG.	BURST	COLLAPSE	TENSION
*SurfaceCasing	1				Csg Ratings:	2950	1370	244000
8-5/8"	0	350	24	J-55	STC	15.02	12.30	31.31
**Production Casing					Csg Ratings:	5320	4910	247000
5-1/2" Prod mode						1.95	1.80	1.88
Stim mode	0	7740	17	J-55	LTC	1.55	1.80	1.88

#### Assumptions:

- 1) Surf. Csg max anticipated surface pressure (MASP) = Fracture Gradient Gas Gradient (0.115pis/ft\*TVDshoe)
- 2) Production Casing MASP (production mode) = Pore Pressure Gas Gradient \* TVDshoe)
- 3) Prod csg MASP (stim mode) = Frac Gradient\*TVDshoe+Perf Friction+Pipe Friction Hydr. Pressure
- 4) All collapse calculations assume fully evacuated casing w/ gas gradient
- 5) All tension calculations assume air weight

*Fracture Gradient at surface casing shoe =	13.00	ppg
*Pore pressure at surface casing shoe =	8.33	ppg
**Pore pressure at production casing shoe =	9.10	ppg
**Fracture gradient at production casing shoe =	0.80	psi/ft
**Perforation Friction =	100.00	psig
**Pipe Friction =	65.00	psi/1000ft
**Fracture treatment displacement fluid =	8.33	ppg

All casing shall be new or, if used, inspected and tested. Used casing shall meet or exceed API standards for new casing.

All casing strings shall have a minimum of 1 (one) centralizer on each of the bottom three (3) joints.

b. Cementing Design: Federal 14-19-6-21

FT. OF I	nr.	DESCRIPTION	SACKS	EXCESS*	WEIGHT	YIELD
Surface csg LEAD	350	Class G w/ 2% BWOC CaCl + 1/4#/sx celloflake.	172	30%	15.8	1.17
Prod. Csg LEAD	5740	*Premlite II High Strength + 5#/sx kolseal + 1/4#/sx Celloflake + 0.3% BWOC FL-63 or equivelent cmt.	377	30%	11.0	3.26
Prod. Csg. TAIL	2000	*50/50 poz G 0.05#/sx static free + 10% BWOW NaCL + 0.2% BWOC R-3 + 0.002 gps FP-6L or equivelent cmt.	363	30%	14.3	1.24

<sup>\*</sup>Actual volume pumped will be 15% over caliper log

Waiting On Cement: A minimum of four (4) hours shall elapse prior to attempting any pressure testing of the BOP equipment which would subject the surface casing cement to pressure, and a minimum of six (6) hours shall elapse before drilling out of the wiper plug, cement, or shoe is begun. WOC time shall be recorded in the Driller's Log. Compressive Strength shall be a minimum of 500 psi prior to drilling out.

Surface String: Class G (or equivalent) Cement 200 ft<sup>3</sup> (Calc with 30% excess)

<sup>1)</sup> Compressive Strength of lead cmt: 1800 psi @ 24 hrs, 2250 psi @ 72 hrs

<sup>2)</sup> Compressive Strength of tail cmt: 2500 psi @ 24 hrs

Production String: Pre-Flush: 20 bbls Mud Clean (or equivalent). Spacer: 10 Bbls fresh water.

Lead:

1229 ft^3 Premlite II @ 3.26 cf/sack

Tail:

450 ft^3 50/50 Poz @ 1.24 cf/sack

(Actual cement volumes will be calculated from open hole logs, plus 15% excess).

The Vernal BLM Office shall be notified, with sufficient lead time, in order to have a BLM representative on location while running all casing strings and cementing.

The 8-5/8" surface casing shall in all cases be cemented back to surface. In the event that during the primary surface cementing operation the cement does not circulate to surface, or if the cement level should fall back more than 8 feet from surface, then a remedial surface cementing operation shall be performed to insure adequate isolation and stabilization of the surface casing.

The production casing cementing program shall be conducted as approved to protect and/or isolate all usable water zones, potentially productive zones, lost circulation zones, abnormally pressured zones, and any prospectively valuable deposits of minerals.

The minimum diameter for conductor pipe shall be 13 3/8". The conductor pipe will be cemented back to surface or removed.

As a minimum, usable water zones shall be isolated and/or protected by having a cement top for the production casing at least 200 feet above the base of the usable water. If gilsonite is encountered while drilling, it shall be isolated and/or protected via the cementing program.

Top plugs shall be used to reduce contamination of cement by displacement fluid. A bottom plug or other acceptable technique, such as a suitable preflush fluid, inner string cement method, etc., shall be utilized to help isolate the cement from contamination by the mud being displaced ahead of the cement slurry.

All casing strings below the conductor shall be pressure tested to 0.22 psi per foot of casing string length or to 1500 psi, whichever is greater, but not to exceed 70% of the minimum internal yield. If pressure declines more than 10% in 30 minutes, corrective action shall be taken.

A Form 3160-5, "Sundry Notices and Reports on Wells" shall be filed with the Vernal Office Manager within 30 days after the work is completed. This report must include the following information:

Setting of each string of casing showing the size, grade, weight of casing set, depth, amounts and type of cement used, whether cement circulated or the top of the cement behind the casing, depth of the cementing tools used, casing test method and results, and the date of the work done. Spud date will be shown on the first reports submitted.

#### 5. <u>MINIMUM SPECIFICATIONS FOR PRESSURE CONTROL:</u>

The Company's Class III (3) 3M minimum specifications for pressure control equipment for a standard Mesa Verde development well are as follows:

A 3000 psi WP hydraulic BOP stack consisting of two ram preventers (double or two singles) and an annular preventer per Exhibit C.

Connections - All components on the stack and choke and kill lines shall have either flanged, studded, clamp hub or equivalent proprietary connections except control line outlets and pressure gauges.

Annular Preventer - The annular shall be rated to a minimum 3000 psi WP, if one set of pipe rams is installed, and shall be installed at the top of the stack. If a 3 ram preventer and 2 preventers equipped with pipe rams are used, a 3000 psi WP is acceptable. A valve rated to full annular WP shall be mounted on the closing side using XX heavy fittings.

Rams and Position - The lower cavity shall contain pipe rams (master ram) to fit the upper section of the drill pipe in use. Casing rams are not required. The upper cavity shall contain blind rams for a 3 ram stack. A means shall be available to mechanically lock the rams closed.

BOP Side Outlets - The choke and kill lines outlets shall be a minimum 2 inches nominal and can be either in the BOP body between the rams or in a spool placed between the rams. Two gate valves rated to full BOP WP shall be installed on both outlets. The outside choke line valve shall be hydraulically operated.

Choke and Kill Lines - The lines shall be a minimum 2 inches nominal, made of seamless steel, seamless steel with Chiksan™ joints, or armored fire resistant hose rated to required BOP WP. The choke line shall be as straight as possible, and securely anchored. All turns shall be 90 degrees and "targeted." When hoses are used, they shall have a rated test pressure of at least 1.5 times the required BOP WP.

Secondary Kill Outlet - One outlet located below the lower rams either on the BOP stack or on the wellhead shall be fitted with two valves, a needle valve with adapter and pressure gauge, all rated to wellhead WP or greater. This outlet is not to be used in normal operations.

Closing Methods - At least three means of operating all the preventers shall be provided, consisting of any combination of the following:

- a. An air and/or electrically operated hydraulic pump(s) capable of closing one ram preventer in 30 seconds.
- b. An accumulator capable of closing all preventers and opening the hydraulic choke line valve, without requiring a recharge.
- c. Manual method with closing handles and/or wheels to be located in an unobstructed area, away from the wellhead, or additional equipment per item "a" and item "b" to provide full redundancy to method.
- d. Bottled nitrogen or other back-up storage system to equal accumulator capacity, manifolded to by-pass the accumulator and close the BOP directly.

Hydraulic Closing Unit - The closing unit shall be equipped with:

- a. A control manifold with a control valve for each preventer and hydraulically operated valve; a regulator for the annular preventer; and interconnected steel piping. Each blowout preventer control valve should be turned to open position during drilling operations.
- b. Control lines to BOPs of seamless steel, seamless steel lines with Chiksan joints, or fire resistant steel armored hose.

c. A remote control panel from which each preventer and hydraulic valve can be operated. If the remote panel becomes inoperable, it shall not interfere with the operation of the main closing unit.

Location - For land locations, the hydraulic closing unit shall be located in an unobstructed area outside the substructure at least 50 feet from the wellhead and the remote panel shall be located near the driller's position. For offshore installations, the location of the closing unit and remote panel shall be such that one is located near the driller position and the other is located away from the well area and is accessible from a logical evacuation route.

Choke Manifold - The minimum equipment requirements are shown in **Exhibit C**. The choke manifold shall be located at least 5 feet from the BOP stack, outside the substructure.

Connections - All components of the manifold shall be equipped with flanged, studded, clamped hub or equivalent proprietary connections (gauge connections exempted).

Flow Wings - Three flow wings shall be provided, capable of transmitting well returns through conduits that are a minimum 2 inches nominal. Two wings shall be equipped with chokes and one gate valve upstream of each choke; one gate valve ahead of the discharge manifold; and one valve downstream of each choke; at least one choke shall be adjustable. A gate valve shall be installed directly upstream of the cross if single valves are installed upstream of the chokes. One wing with one gate valve capable of transmitting well returns directly to the discharge manifold. The chokes, the valve(s) controlling the unchoked discharge wing, and all equipment upstream of these items shall be rated to required BOP WP.

Discharge Manifold - A discharge manifold (buffer tank), capable of diverting well returns overboard or to the blowdown/reserve pit; to the mud gas separator; and to the shaker tank is required. Lead-filled bull plugs (or equivalent erosion resistant components) shall be installed in the discharge manifold directly opposite the choked wings.

Pressure Monitoring - A means of monitoring the inlet pressure of the choke manifold shall be provided. The capability to isolate this outlet shall be provided.

Drillstring Control Devices - An upper and lower kelly valve, drillstring safety valve including correct closing handle, and an inside BOP shall be provided. The safety valve and inside BOP shall have connections or crossovers to fit all tubulars with OD to allow adequate clearance for running in the hole. All drillstring valves shall be rated to the required BOP WP.

Auxiliary Equipment - A kelly saver sub with casing protector larger than tool joints at top of drillstring (for kelly equipped rigs); a wear bushing or wear flange to protect the seal area of the wellhead while drilling; and a plug or cup type BOP test tool shall be provided.

The BOP and related equipment shall meet the minimum requirements of Onshore Oil and Gas Order No. 2 for equipment and testing requirements, procedures, etc., for a 3M system, and individual components shall be operable as designed.

Function test of the BOP equipment shall be made daily. All required BOP tests and/or drills shall be recorded in the Driller's report.

Chart recorders will be used for all pressure tests. Test charts, with individual test results identified, shall be maintained on location while drilling and shall be made available to BLM representatives upon request.

If an air compressor is on location and is being utilized to provide air for the drilling medium while drilling, the special drilling requirements in Onshore Oil and Gas Order No. 2 regarding air or gas shall be adhered to. If a mist system is being utilized, the requirement for a deduster shall be waived.

#### 6. TYPE AND CHARACTERISTICS OF THE PROPOSED CIRCULATION MUDS:

From surface to TD, a fresh water system will be utilized. Hole stability and hole cleaning will be accomplished with a fresh water based mud system. This fresh water system will typically contain Total Dissolved Solids (TDS) of less than 3000 PPM. Anticipated maximum mud weight is 9.0 lbs/gal. If necessary to control formation fluids or pressure, the system will be weighted with the addition of bentonite gel, and if pressure conditions warrant, with barite.

No chromate additives will be used in the mud system on Federal and/or Indian lands without prior BLM approval to ensure adequate protection of fresh aquifers.

No chemicals subject to reporting under SARA Title III in an amount equal to or greater than 10,000 pounds will be used, produced, stored, transported, or disposed of annually in association with the drilling, testing, or completing of this well. Furthermore, no extremely hazardous substances, as defined in 40 CFR 355, in threshold planning quantities, will be used, produced, stored, transported, or disposed of in association with the drilling, testing, or completing of this well.

Hazardous substances specifically listed by the EPA as a hazardous waste or demonstrating a characteristic of a hazardous waste will not be used in drilling, testing, or completion operations.

#### 7. AUXILIARY SAFETY EQUIPMENT TO BE USED:

#### 8. TESTING, LOGGING AND CORING PROGRAMS:

a. Logging Program:

CBL:

(the log types run may change at the discretion of the geologist)

FDC/CNL/GR/DIL:

TD - 3,200'

A cement bond log will be run from TD to the cement top of the production casing. A field copy will be submitted to the Vernal BLM Office.

- b. Cores: As deemed necessary.
- Drill Stem Tests: No DSTs are planned in the Green River/Wasatch section. It is possible that DST may be required in the Green River Formation.

Drill stem tests, if they are run, will adhere to the following requirements: Initial opening of the drill stem test tools shall be restricted to daylight hours unless specific approval to start during other hours is obtained from the Authorized Officer (AO). However, DSTs may be allowed to continue at night if the test was initiated during daylight hours and the rate of flow is stabilized and if adequate lighting is available (i.e., lighting which is adequate for visibility and vapor-proof for safe operations). Packers can be released but tripping shall not begin before daylight, unless prior approval is obtained from the AO. Closed chamber DSTs may be performed day or night.

Some means of reverse circulation shall be provided in case of flow to the surface showing evidence of hydrocarbons.

Separation equipment required for the anticipated recovery shall be properly installed before a test starts.

If a DST is performed, all engines within 100 feet of the wellbore that are required to be operational during the test shall have spark arresters or water-cooled exhausts.

#### 9. <u>ANTICIPATED ABNORMAL PRESSURE OR TEMPERATURE:</u>

Possible abnormal temperatures and/or pressures are anticipated in the lower Mesaverde and Mancos Formations. No hydrogen sulfide has been encountered or is known to exist from previous drilling in the area at this depth. Maximum anticipated bottomhole pressure will be approximately equal total depth in feet multiplied by a 0.45 psi/foot gradient.

### 10. ANTICIPATED STARTING DATE AND DURATION OF THE OPERATIONS:

#### a. Drilling Activity

**Anticipated Commencement Date:** 

Drilling Days: Completion Days: Upon approval of the site specific APD.

Approximately 10 days. Approximately 12 - 20 days.

#### b. Notification of Operations

The Vernal BLM office will be notified at least 24 hours **prior** to the commencement of spudding the well (to be followed with a Sundry Notice, Form 3160-5), of initiating pressure tests of the blowout preventer and related equipment, and running casing and cementing of all casing strings. Notification will be made during regular work hours (7:45 a.m.-4:30 p.m., Monday - Friday except holidays).

<u>Immediate Report</u>: Spills, blowouts, fires, leaks, accidents, or any other unusual occurrences shall be promptly reported in accordance with the appropriate regulations, Onshore Orders, or BLM policy.

No location will be constructed or moved, no well will be plugged, and no drilling or workover equipment will be removed from a well to be placed in suspended status without prior approval from the AO. If operations are to be suspended, prior approval of the AO will be obtained and notification given to the BLM before resumption of operations.

Daily drilling and completion reports shall be submitted to the Vernal BLM Office on a weekly basis.

Whether the well is completed as a dry hole or a producer, the "Well Completion and Recompletion Report and Log" (Form 3160-4) will be submitted not later than 30 days after completion of the well or after completion of operations being performed, in accordance with 43 CFR 3164. One copy of all logs, core descriptions, core analyses, well test data, geologic summaries, sample description, and all other surveys or data obtained and compiled during the drilling, workover, and/or completion operations will be filed with Form 3160-4. Samples (cuttings, fluids, and/or gases) will be submitted when requested by the Authorized Officer (AO).

A completion rig will be used for completion operations after the wells are stimulated to run the production tubing.. All conditions of this approved plan will be applicable during all operations conducted with the completion rig.

Operator shall report production data to the MMS pursuant to 30 CFR 216.5 using form MMS/3160. In accordance with Onshore Oil and Gas Order No. 1, a well will be reported on form 3160-6, "Monthly Report of Operations," starting with the month in which operations commence and continue each month until the well is physically plugged and abandoned. This report will be filed with the Vernal BLM Office.

The date on which production is commenced or resumed will be construed for oil wells as the date on which liquid hydrocarbons are first sold or shipped from a temporary storage facility, such as a test tank, and for which a run ticket is required to be generated, or the date on which liquid hydrocarbons are first produced into a permanent storage facility, whichever occurs first; and for gas wells, as the date on which associated liquid hydrocarbons are first sold or shipped from a temporary storage facility, such as a test tank, and for which a run ticket is required to be generated, or the date on which gas is measured through permanent metering facilities, whichever occurs first.

Should the well be successfully completed for production, the AO will be notified when the well is placed in a producing status. Such notification will be sent by written communication not later than 5 days following the date when the well is placed on production.

Pursuant to Onshore Order No. 7, with the approval of the AO, produced water may be temporarily disposed of into unlined pits for a period of up to 90 days. During this period, an application for approval of the permanent disposal method must be submitted to the AO.

Pursuant to NTL-4A, lessees or operators are authorized to vent/flare gas during the initial well evaluation tests, not to exceed 30 days or the production of 50 MMCF of gas, whichever occurs first. An application must be filed with the AO and approval received for any venting/flaring of gas beyond the initial 30 days or authorized test period.

A schematic facilities diagram, as required by 43 CFR 3162.7-5(b.9.d), shall be submitted to the Vernal BLM Office within 60 days of installation or first production, whichever occurs first. All site security regulations, as specified in Onshore Oil & Gas Order No. 3, shall be adhered to. All product lines entering and leaving hydrocarbon storage tanks will be effectively sealed in accordance with 43 CFR 3162.7-5(b.4).

Well abandonment operations shall not be commenced without the prior approval of the AO. In the case of newly drilled dry holes or failures, and in emergency situations, oral approval will be obtained from the AO. A "Subsequent Report of Abandonment", Form 3160-5, will be filed with the Authorized Officer within 30 days following completion of the well for abandonment. This report will indicate placement of the plugs and current status of the surface restoration. Final Abandonment will not be approved until the surface reclamation work required by the approved APD or approved abandonment notice has been completed to the satisfaction of the AO, or the appropriate surface managing agency.

Pursuant to Onshore Oil and Gas Order No. 1, lessees and operators have the responsibility to see that their exploration, development, production, and construction operations are conducted in a manner which conforms with applicable Federal laws and regulations and with the State and local laws, to the extent to which they are applicable, to operations on Federal or Indian lands.

## NEWFIELD PRODUCTION COMPANY FEDERAL #14-19-6-21 SE/SW SECTION 19, T6S, R21E UINTAH COUNTY, UTAH

#### ONSHORE ORDER NO. 1

#### MULTI-POINT SURFACE USE & OPERATIONS PLAN

#### 1. EXISTING ROADS

See attached Topographic Map "A"

To reach Newfield Production Company well location site Federal #14-19-6-21 located in the SE 1/4 SW 1/4 Section 19, T6S, R21E, Uintah County, Utah:

Proceed southwesterly out of Vernal, Utah along Highway 40 - 10.2 miles  $\pm$  to the junction of this highway and an existing road to the southeast; proceed southeasterly -4.8 miles  $\pm$  to it's junction with an existing road to the southwest; proceed southwesterly -0.3 miles  $\pm$  to it's junction with the beginning of the proposed access road; proceed southeasterly along the proposed access road  $-190^{\circ}$  + to the proposed well location.

#### 2. PLANNED ACCESS ROAD

See Topographic Map "B" for the location of the proposed access road.

#### 3. LOCATION OF EXISTING WELLS

Refer to Exhibit "B".

#### 4. LOCATION OF EXISTING AND/OR PROPOSED FACILITIES

The following guidelines will apply if the well is productive:

- A dike will be constructed completely around those production facilities that contain fluids (i.e., production tanks, produced water tanks). These dikes will be constructed of compacted subsoil, be impervious, hold 110% of the capacity of the largest tank, and be independent of the back cut. If a Spill Prevention, Control, and Countermeasure (SPCC) Plan is required by the Environmental Protection Agency, the containment dike may be expanded with approval from the AO to meet SPCC requirements. (The use of topsoil for the construction of dikes will not be allowed).
- All permanent (on site six months or longer) above the ground structures constructed or
  installed, including pumping units, will be painted a flat, non-reflective, earthtone color to
  match one of the standard environmental colors which are described by the five state Rocky
  Mountain Inter-Agency Committee. All facilities will be painted within six months of
  installation. The required color for this facility as determined by the AO will be Carlsbad
  Canyon.

A description of the proposed pipelines are included. See to Topographic Map "C". Pipeline segments will be welded together on disturbed areas in or near the location (whenever possible), and dragged into place.

#### 5. LOCATION AND TYPE OF WATER SUPPLY

Water for drilling and completion purposes will be obtained from one of the following sources. Refer to Exhibit "E" for a copy of the Water Use Authorization.

Permit #: 43-9077

William E. Brown Sec. 32, T6S R20E

Permit #: 43-10447

Kenneth Joe Batty Sec. 9, T8S R20E

Fresh water may also be purchased by Newfield Production from the Johnson Water District and trucked to the proposed location for the purpose of drilling.

#### 6. SOURCE OF CONSTRUCTION MATERIALS

Surface and subsoil materials in the immediate area will be utilized. Any gravel will be obtained from the Company's privately owned source. The use of materials under BLM jurisdiction will conform to 43 CFR 3610.2-3.

#### 7. <u>METHODS FOR HANDLING WASTE DISPOSAL</u>

Drill cuttings will be contained and buried in the reserve pit.

Drilling fluids, including salts and chemicals will be contained in the reserve pit. Upon termination of drilling and completion operations, the liquid contents of the reserve pit will be used at the next drill site or will be removed and disposed of at an approved waste disposal facility within 120 days after drilling is terminated. Immediately upon well completion, any hydrocarbons in the pit shall be removed in accordance with 43 CFR 3162.7-1.

The reserve pit will be constructed on the location and will not be located within natural drainage ways, where a flood hazard exists or surface runoff will destroy or damage the pit walls. The reserve pit will be constructed so that it will not leak, break, or allow discharge of liquids.

Annular disposal of the drilling fluids may be requested as a disposal option. An application for an individual annular disposal permit will be made prior to disposing of any fluids in this manner.

Reserve pit leaks are considered an undesirable event and will be orally reported to the AO.

After first production, produced wastewater will be confined to the approved pit or storage tank, or removed and disposed of at an approved facility, for a period not to exceed 90 days. During the 90-day period, in accordance with Onshore Order # 7, an application for approval of a permanent disposal method and location will be submitted for the Authorized Officer's approval.

The indiscriminate dumping of produced fluids on roads, well sites, or other areas will not be allowed.

Any spills of oil, gas, salt water, or other noxious fluids will be immediately cleaned up and removed to an approved disposal site.

A chemical porta-toilet will be furnished with the drilling rig.

Garbage, trash, and other waste materials will be collected in a portable, self-contained, fully enclosed trash cage during operations. Trash will not be burned on location.

All debris and other waste material not contained in the trash cage will be cleaned up and removed from the location immediately after removal of the drilling rig. No chemicals subject to reporting under SARA Title III (hazardous materials) in an amount greater than 10,000 pounds will be used, produced, stored, transported, or disposed of annually in association with the drilling, testing, or completing of wells within the River Bend Field. Furthermore, extremely hazardous substances, as defined in 40 CFR 355, in threshold planning quantities, will not be used, produced, stored, transported, or disposed of in association with the drilling, testing, or completing of wells within the River Bend Field. Specific APDs shall address any modifications from this policy.

Attachment 1 contains the EPA List of Nonexempt Exploration and Production Wastes.

#### 8. ANCILLARY FACILITIES

#### Surface gas lines:

- No installation of surface gas lines will be performed during periods when the soil is too
  wet to adequately support installation equipment. If such equipment creates ruts in
  excess of three (3) inches deep, the soil will be deemed too wet to adequately support the
  equipment.
- Where possible, surface gas lines shall be placed as close to existing oil field roads as
  possible without interfering with normal road travel or road maintenance activities. For
  lines that are installed cross-country (not along access roads), travel along the lines will
  be infrequent and for maintenance needs only. If surface disturbance occurs along the
  lines, the operator will reclaim the land to the satisfaction of the AO of the appropriate
  surface management agency.

All surface lines will be either black or brown in color.

#### 9. WELL SITE LAYOUT

See attached Location Layout Diagram.

#### 10. PLANS FOR RESTORATION OF SURFACE

#### a. Producing Location:

Topsoil will be stripped from the location and places where it can most easily be recovered for inerim reclamation. The topsoil shall be respread over the entire location to a depth of at least four to six inches as soon as completion operations have been finished and recontouring of fill slopes is complete. At this point the production equipment can be set. Topsoil will be stockpiled separately from subsoil materials. Topsoil salvaged from the reserve pit will be stockpiled separately near the reserve pit. The areas of the location of the location not needed for production operation, including the reserve pits, shall be seeded.

Topsoil that will be stored more than one year before reclamation begins:

- will be windrowed, where possible, to a maximum depth of three (3) to four (4) feet near the margin of the well site:
- will be broadcast seeded with the seed mixture specified in the approved permit immediately after windrowing;

will be "walked" with tracked heavy equipment to crimp the seeds into the soil.

Immediately upon well completion, the location and surrounding area will be cleared of trash and debris and all unused tubing and materials not required for production.

Before any dirt work associated with location restoration takes place, the reserve pit shall be as dry as possible. All debris in it will be removed. Other waste and spoil materials will be disposed of immediately upon completion of operations.

If a synthetic, nylon-reinforced liner is used, the excess liner will be cut off and removed and the remaining liner will be torn and perforated while backfilling the reserve pit. Alternatively, the pit will be pumped dry, the liner folded into the pit, and the pit backfilled. The liner will be buried to a minimum of four (4) feet deep. The AO will provide a seed mixture to revegetate the reserve pit and other unused disturbed areas at the time of the onsite.

The reserve pit and that portion of the location not needed for production facilities/operations will be recontoured to approximate the natural contours. The reserve pit will be reclaimed within 120 days from the date of well completion, weather permitting. This will be completed by the backfilling and crowning of the pit to prevent water from standing. Topsoil will be respread, and the pit area reseeded immediately following the respreading of the topsoil.

The following seed mixture will be used on the topsoil stockpile, to the recontoured surface of the reserve pit, and for final reclamation: (All poundages are in pure live seed)

#### b. Dry Hole/Abandoned Location:

At the time of final abandonment, the intent of reclamation will be to return disturbed areas to near natural conditions in accordance with applicable federal and state laws, rules and regulations and agreements with private surface landowners. All disturbed surfaces will be recontoured to the approximate natural contours, with reclamation of the well pad and access roads to be performed within six (6) months, weather permitting, after final abandonment. The surface of disturbed areas will be recontoured to blend all cuts, fills, road berms, and borrow ditches to be natural in appearance as compared to the surrounding terrain. Abandoned well sites, roads, and other disturbed areas will be restored as near as practical to their original condition. Where applicable, these conditions may include the reestablishment of irrigation systems, the reestablishment of appropriate soil conditions, and the reestablishment of vegetation as specified.

After recontouring of disturbed areas, any stockpiled topsoil will be spread over the surface, and the area reseeded immediately. The location and access roads will be revegetated to the satisfaction of the AO of the appropriate surface management agency and in accordance with any applicable agreements with private surface landowners. The seed mixture will be that provided at the time of the onsite or, the AO will be contacted at the time of reclamation for the appropriate seed mixture. Seed will be drilled on the contour to an appropriate depth. Reseeding operations will be performed immediately after completion of reclamation operations.

Dry mulch may be considered as one method to enhance the re-establishment of desired native plant communities. If straw or hay mulch is used, the straw or hay must be certified "weed-free" and the certification documentation submitted to the AO prior to its application.

At final abandonment, the casing will be cut off at the base of the cellar or 3 feet below the final restored ground level, whichever is deeper. The Operator will cap the casing with a metal plate a minimum of 0.25 inches thick. The cap will be welded in place and the well

location and identity will be permanently inscribed on the cap. The cap will be constructed with a weep hole.

## 11. <u>SURFACE OWNERSHIP</u> – Don and Linda Demille, ET AL Bruce and Joyce Barns, ET AL

#### 12. OTHER ADDITIONAL INFORMATION

The Archaeological Resource Survey and Paleontological Resource Survey for this area are attached. MOAC Report #06-601, 1/17/07. Paleontological Resource Survey prepared by, Wade E. Miller, 9/23/06. See attached report cover pages, Exhibit "D".

For the Federal #14-19-6-21 Newfield Production Company requests 190' of disturbed area be granted in Lease UTU-75097 to allow for construction of the proposed access road. Refer to Topographic Map "B". The planned access road will be an 18' crown road (9' either side of the centerline) with drainage ditches along either side of the proposed road whether it is deemed necessary in order to handle any run-off from normal meteorological conditions that are prevalent to this area. The maximum grade will be less than 8%. There will be no culverts required along this access road. There will be barrow ditches and turnouts as needed along this road. There are no fences encountered along this proposed road. There will be no new gates or cattle guards required. All construction material for this access road will be borrowed material accumulated during construction of the access road.

Newfield Production Company requests a 350' ROW in Lease UTU-02622B and 1,130' of disturbed area be granted in Lease UTU-75097 to allow for construction of the proposed surface gas lines. It is proposed that the ROW and disturbed area will temporarily be 50' wide to allow for construction of a 6" gas gathering line, and a 3" poly fuel gas line, with a permanent width of 30' upon completion of the proposed gas lines. The construction phase of the proposed gas lines will last approximately (5) days. Both lines will tie into the existing pipeline infrastructure. **Refer to Topographic Map "C."** 

#### Water Disposal

Immediately upon first production, all produced water will be confined to a steel storage tank. If the production water meets quality guidelines, it will be transported to a water disposal well in the Horseshoe Bend Area by company or contract trucks.

Water not meeting quality criteria, will be disposed of at State of Utah approved surface disposal facility.

#### Reserve Pit Liner

The reserve pit will be lined with a synthetic reinforced liner a minimum of 12-mil thick, with sufficient bedding used to cover any rocks. The liner will overlap the pit walls and be covered with dirt and/or rocks to hold it in place. Trash or scrap that could puncture the liner will not be disposed of in the pit.

#### 13. LESSEE'S OR OPERATORS REPRESENTATIVE AND CERTIFICATION

#### <u>Representative</u>

Name:

Dave Allred

Address:

Route #3 Box 3630

Myton, UT 84052

Telephone:

(435) 646-3721

**Certification** 

Please be advised that NEWFIELD PRODUCTION COMPANY is considered to be the operator of well #14-19-6-21 SE/SW Section 19, Township 6S, Range 21E: Lease UTU-75097 Uintah County, Utah: and is responsible under the terms and conditions of the lease for the operations conducted upon the leased lands. Bond coverage is provided by US Specialty Insurance #B001832.

I hereby certify that the proposed drillsite and access route have been inspected, and I am familiar with the conditions which currently exist; that the statements made in this plan are true and correct to the best of my knowledge; and that the work associated with the operations proposed here will be performed by Newfield Production Company and its contractors and subcontractors in conformity with this plan and the terms and conditions under which it is approved. This statement is subject to the provisions of 18 U.S.C. 1001 for the filing of a false statement.

#### MEMORANDUM of EASEMENT, RIGHT-OF-WAY and SURFACE USE AGREEMENT

This Easement, Right-of-Way and Surface Use Agreement ("Agreement") is entered into this 4th day of April, 2007 by and between Don and Linda Demille, address is PO Box 1617 Roosevelt, Utah 84066 and Bruce and Joyce Barns whose address is Box 142 Maybell, Colorado 81640. ("Surface Owner," whether one or more) and Newfield Production Company, a Texas corporation ("NEWFIELD"), with offices at 1401 17th Street, Suite #1000, Denver, Colorado 80202, covering certain lands, (the "Lands") situated in Umfah County, Utah described as follows:

Township 6 South, Range 20 East SESE Section 23 SW/4, NW/SE Section 24

Township 6 South, Range 21 East Lot 4 (SWSW), SESW Section 19

Uintah County, Utah, being, 319.86 acres more or less,

and associated roads and pipeline routes beginning at each wellsite and traversing the lands as shall be agreed upon prior to the construction of same.

For and in consideration of the sum of ten dollars (\$10.00), and other valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the undersigned hereby agree to the terms and provisions set forth as follows:

#### 1. Compensation for Well; Release of All Claims

NEWFIELD shall pay to Surface Owner the sum as set forth in and according to the terms of that certain Letter Agreement for Easement, Right-of Way and Surface Use by and between Surface Owner and NEWFIELD, dated April 13, 2007, as full payment and satisfaction for any and all detriment, depreciation, injury or damage of any nature to the Lands or growing crops thereon that may occur as a result of NEWFIELD's drilling or completion operations or its continuing activities for the production or transportation of oil, gas, or other hydrocarbons or products associated with the foregoing including, but not limited to surface use, access, pipelines, gathering lines, pipeline interconnections, and any and all other reasonable or customary uses of land related to said operations or activities.

#### 2. Grant of Right of Way and Easement

Surface Owner hereby grants, bargains, leases, assigns, and conveys to NEWFIELD an easement and right-of-way for the purpose of construction, using and maintaining access roads, locations for surface equipment and subsurface gathering lines for each well drilled upon the Lands, pipelines, and pipeline interconnections for two years from date of this agreement and so long thereafter as NEWFIELD's oil and gas leases remain in effect.

This Agreement shall be binding upon the respective heirs, executors, administrators, successors, and assigns of the undersigned.

These Parties hereto have executed this docume	nt effective as of the day first above written.

Date / Time

### **Surface Statement of Basis**

The proposed location is approximately 15.3 road miles southwest of Vernal, UT in the Twelve Mile Wash Drainage. Twelve Mile Wash is an ephemeral drainage with the only flows occurring during intense summer storms and occasionally in the springtime following melts of heavy snow packs. The Green River is approximately 1 mile down drainage. Broad flats or plateau on ridge tops and wide drainage bottoms bordered by low hills characterize the area. No streams, seeps or springs exist in the area. Access is by State, County, and private oilfield development roads. One hundred and ninety feet of new construction across private lands will be required to reach the location.

The proposed Federal 14-19-6-21 proposed oil well location is on an exposed bedrock ridgetop with a slight slope to the north. It is surrounded except on the east by evaporation ponds or overflow ponds for the evaporation pond facility. The overflow pond to the north is constructed but not yet lined while a new evaporation pond to the south is being constructed. Ponds to the west are completed and functional. Although the location is on a rocky ridge, it is anticipated that blasting for pad and reserve pit construction will not be required. An overhead powerline ends east of the proposed location. The powerline is burried from this point extending west to the facilities at the evaporation ponds. It will not be interferred with by the construction of the proposed pad. Metal tanks used in connection with the evaporation ponds are located approximatel 100 yards west of the proposed pad.

The surface of the location is fee lands owned by Don and Linda Demille and Bruce and Joyce Barns. Mr. Demille and Mr. Barns were invited to attend the pre-site visit. Neither attended. A set of location layout plans was left with Mr. Demille at a road construction site near Roosevelt. He expressed no concern regarding the selected location. A Surface Use Agreement has been executed. The minerals are owned by the Federal Government, and administered by the Bureau of Land Management with a lease to Newfield Production Co.. Mr. Charles MacDonald represented the BLM at the site evaluation. He had no concerns regarding the selected site.

The location appears to be a suitable site and the only one in the immediate area for drilling and operating a well.

Floyd Bartlett

Re:

Federal 14-19-6-21 Well, 796' FSL, 2168' FWL, SE SW, Sec. 19, T. 6 South, R. 21 East,

Uintah County, Utah

### Gentlemen:

Pursuant to the provisions and requirements of Utah Code Ann.§ 40-6-1 et seq., Utah Administrative Code R649-3-1 et seq., and the attached Conditions of Approval, approval to drill the referenced well is granted.

This approval shall expire one year from the above date unless substantial and continuous operation is underway, or a request for extension is made prior to the expiration date. The API identification number assigned to this well is 43-047-39079.

Sincerely,

Gil Hunt

Associate Director

Lease:	UTU-75097	NA.			
Location: <u>SE SW</u>	Sec. 19	T. 6 South	<b>R.</b> 21 East		

### **Conditions of Approval**

#### 1. General

Compliance with the requirements of Utah Admin. R. 649-1 *et seq.*, the Oil and Gas Conservation General Rules, and the applicable terms and provisions of the approved Application for permit to drill.

### 2. Notification Requirements

Notify the division within 24 hours of spudding the well.

• Contact Carol Daniels at (801) 538-5284.

Notify the Division prior to commencing operations to plug and abandon the well.

• Contact Dustin Doucet at (801) 538-5281 (801) 733-0983 home

### 3. Reporting Requirements

All required reports, forms and submittals will be promptly filed with the Division, including but not limited to the Entity Action Form (Form 6), Report of Water Encountered During Drilling (Form 7), Weekly Progress Reports for drilling and completion operations, and Sundry Notices and Reports on Wells requesting approval of change of plans or other operational actions.

- 4. State approval of this well does not supersede the required federal approval, which must be obtained prior to drilling.
- 5. Compliance with the Conditions of Approval/Application for Permit to Drill outlined in the Statement of Basis. (Copy Attached)
- 6. This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

### A COPY OF THESE CONDITIONS SHALL BE FURNISHED TO YOUR FIELD REPRESENTATIVE TO INSURE COMPLIANCE

All lease and/or unit operations are to be conducted in such a manner that full compliance is made with the applicable laws, regulations (43 CFR Part 3160), and this approved Application for Permit to Drill including Surface and Downhole Conditions of Approval. The operator is considered fully responsible for the actions of his subcontractors. A copy of the approved APD must be on location during construction, drilling, and completion operations. This permit is approved for a two (2) year period, or until lease expiration, whichever occurs first. An additional extension, up to two (2) years, may be applied for by sundry notice prior to expiration.

### **NOTIFICATION REQUIREMENTS**

Location Construction	-	Forty-Eight (48) hours prior to construction of location and

BOP & Related Equipment Tests	_   -	Twenty-Four (24) hours prior to initiating pressure tests.
(Notify Supv. Petroleum Tech.)		
First Production Notice	_	Within Five (5) business days after new well begins or
(Notify Petroleum Engineer)		production resumes after well has been off production for more
		than ninety (90) days.

### SURFACE USE PROGRAM CONDITIONS OF APPROVAL (COAs)

- If there is an active Gilsonite mining operation within 2 miles of the well location, operator shall notify the Gilsonite operator at least 48 hours prior to any blasting during construction.
- If paleontological materials are uncovered during construction, the operator is to immediately stop work and contact the Authorized Officer (AO). A determination will be made by the AO as to what mitigation may be necessary for the discovered paleontologic material before construction can continue.

### **SITE SPECIFIC COAs:**

None

Page 3 of 7 Well: Federal 14-19-6-21 12/30/2008

# DOWNHOLE PROGRAM CONDITIONS OF APPROVAL (COAs)

### SITE SPECIFIC DOWNHOLE COAs:

None

All provisions outlined in Onshore Oil & Gas Order #2 Drilling Operations shall be strictly adhered to. The following items are emphasized:

### DRILLING/COMPLETION/PRODUCING OPERATING STANDARDS

- The spud date and time shall be reported orally to Vernal Field Office within 24 hours of spudding.
- Notify Vernal Field Office Supervisory Petroleum Engineering Technician at least 24 hours in advance of casing cementing operations and BOPE & casing pressure tests.
- All requirements listed in Onshore Order #2 III. E. Special Drilling Operations are applicable for air drilling of surface hole.
- Blowout prevention equipment (BOPE) shall remain in use until the well is completed or abandoned. Closing unit controls shall remain unobstructed and readily accessible at all times. Choke manifolds shall be located outside of the rig substructure.
- All BOPE components shall be inspected daily and those inspections shall be recorded in the
  daily drilling report. Components shall be operated and tested as required by Onshore Oil & Gas
  Order No. 2 to insure good mechanical working order. All BOPE pressure tests shall be
  performed by a test pump with a chart recorder and <u>NOT</u> by the rig pumps. Test shall be
  reported in the driller's log.
- BOP drills shall be initially conducted by each drilling crew within 24 hours of drilling out from under the surface casing and weekly thereafter as specified in Onshore Oil & Gas Order No. 2.
- Casing pressure tests are required before drilling out from under all casing strings set and cemented in place.
- No aggressive/fresh hard-banded drill pipe shall be used within casing.
- Cement baskets shall not be run on surface casing.
- The operator must report all shows of water or water-bearing sands to the BLM. If flowing water is encountered it must be sampled, analyzed, and a copy of the analyses submitted to the BLM Vernal Field Office.

Page 4 of 7 Well: Federal 14-19-6-21 12/30/2008

- The operator must report encounters of all non oil & gas mineral resources (such as Gilsonite, tar sands, oil shale, trona, etc.) to the Vernal Field Office, in writing, within 5 working days of each encounter. Each report shall include the well name/number, well location, date and depth (from KB or GL) of encounter, vertical footage of the encounter and, the name of the person making the report (along with a telephone number) should the BLM need to obtain additional information.
- A complete set of angular deviation and directional surveys of a directional well will be submitted to the Vernal BLM office engineer within 30 days of the completion of the well.
- While actively drilling, chronologic drilling progress reports shall be filed directly with the BLM, Vernal Field Office on a weekly basis in sundry, letter format or e-mail to the Petroleum Engineers until the well is completed.
- A cement bond log (CBL) will be run from the production casing shoe to the <u>top of cement</u> and shall be utilized to determine the bond quality for the production casing. Submit a field copy of the CBL to this office.
- Please submit an electronic copy of all other logs run on this well in LAS format to UT\_VN\_Welllogs@BLM.gov. This submission will supersede the requirement for submittal of paper logs to the BLM.
- There shall be no deviation from the proposed drilling, completion, and/or workover program as approved. Safe drilling and operating practices must be observed. Any changes in operation must have prior approval from the BLM Vernal Field Office.

Page 5 of 7 Well: Federal 14-19-6-21 12/30/2008

### **OPERATING REQUIREMENT REMINDERS:**

- All wells, whether drilling, producing, suspended, or abandoned, shall be identified in accordance with 43 CFR 3162.6. There shall be a sign or marker with the name of the operator, lease serial number, well number, and surveyed description of the well.
- In accordance with 43 CFR 3162.4-3, this well shall be reported on the "Monthly Report of Operations" (Oil and Gas Operations Report ((OGOR)) starting with the month in which operations commence and continue each month until the well is physically plugged and abandoned. This report shall be filed in duplicate, directly with the Minerals Management Service, P.O. Box 17110, Denver, Colorado 80217-0110, or call 1-800-525-7922 (303) 231-3650 for reporting information.
- Should the well be successfully completed for production, the BLM Vernal Field office must be notified when it is placed in a producing status. Such notification will be by written communication and must be received in this office by not later than the fifth business day following the date on which the well is placed on production. The notification shall provide, as a minimum, the following informational items:
  - Operator name, address, and telephone number.
  - Well name and number.
  - Well location (1/41/4, Sec., Twn, Rng, and P.M.).
  - Date well was placed in a producing status (date of first production for which royalty will be paid).
  - The nature of the well's production, (i.e., crude oil, or crude oil and casing head gas, or natural gas and entrained liquid hydrocarbons).
  - The Federal or Indian lease prefix and number on which the well is located; otherwise the non-Federal or non-Indian land category, i.e., State or private.
  - o Unit agreement and/or participating area name and number, if applicable.
  - o Communitization agreement number, if applicable.
- Any venting or flaring of gas shall be done in accordance with Notice to Lessees (NTL) 4A and needs prior approval from the BLM Vernal Field Office.
- All undesirable events (fires, accidents, blowouts, spills, discharges) as specified in NTL 3A will
  be reported to the BLM, Vernal Field Office. Major events, as defined in NTL3A, shall be
  reported verbally within 24 hours, followed by a written report within 15 days. "Other than
  Major Events" will be reported in writing within 15 days. "Minor Events" will be reported on
  the Monthly Report of Operations and Production.

Page 6 of 7 Well: Federal 14-19-6-21 12/30/2008

- Whether the well is completed as a dry hole or as a producer, "Well Completion and Recompletion Report and Log" (BLM Form 3160-4) shall be submitted not later than 30 days after completion of the well or after completion of operations being performed, in accordance with 43 CFR 3162.4-1. Two copies of all logs run, core descriptions, and all other surveys or data obtained and compiled during the drilling, workover, and/or completion operations, shall be filed on BLM Form 3160-4. Submit with the well completion report a geologic report including, at a minimum, formation tops, and a summary and conclusions. Also include deviation surveys, sample descriptions, strip logs, core data, drill stem test data, and results of production tests if performed. Samples (cuttings, fluid, and/or gas) shall be submitted only when requested by the BLM, Vernal Field Office.
- All off-lease storage, off-lease measurement, or commingling on-lease or off-lease, shall have prior written approval from the BLM Vernal Field Office.
- Oil and gas meters shall be calibrated in place prior to any deliveries. The BLM Vernal Field Office Petroleum Engineers will be provided with a date and time for the initial meter calibration and all future meter proving schedules. A copy of the meter calibration reports shall be submitted to the BLM Vernal Field Office. All measurement facilities will conform to the API standards for liquid hydrocarbons and the AGA standards for natural gas measurement. All measurement points shall be identified as the point of sale or allocation for royalty purposes.
- A schematic facilities diagram as required by Onshore Oil & Gas Order No. 3 shall be submitted to the BLM Vernal Field Office within 30 days of installation or first production, whichever occurs first. All site security regulations as specified in Onshore Oil & Gas Order No. 3 shall be adhered to. All product lines entering and leaving hydrocarbon storage tanks will be effectively sealed in accordance with Onshore Oil & Gas Order No. 3.
- Any additional construction, reconstruction, or alterations of facilities, including roads, gathering lines, batteries, etc., which will result in the disturbance of new ground, shall require the filing of a suitable plan and need prior approval of the BLM Vernal Field Office. Emergency approval may be obtained orally, but such approval does not waive the written report requirement.
- No location shall be constructed or moved, no well shall be plugged, and no drilling or workover
  equipment shall be removed from a well to be placed in a suspended status without prior
  approval of the BLM Vernal Field Office. If operations are to be suspended for more than 30
  days, prior approval of the BLM Vernal Field Office shall be obtained and notification given
  before resumption of operations.
- Pursuant to Onshore Oil & Gas Order No. 7, this is authorization for pit disposal of water produced from this well for a period of 90 days from the date of initial production. A permanent disposal method must be approved by this office and in operation prior to the end of this 90-day period. In order to meet this deadline, an application for the proposed permanent disposal method shall be submitted along with any necessary water analyses, as soon as possible, but no later than 45 days after the date of first production. Any method of disposal which has not been approved prior to the end of the authorized 90-day period will be considered as an Incident of Noncompliance and will be grounds for issuing a shut-in order until an acceptable manner for disposing of said water is provided and approved by this office.

Page 7 of 7 Well: Federal 14-19-6-21 12/30/2008

• Unless the plugging is to take place immediately upon receipt of oral approval, the Field Office Petroleum Engineers must be notified at least 24 hours in advance of the plugging of the well, in order that a representative may witness plugging operations. If a well is suspended or abandoned, all pits must be fenced immediately until they are backfilled. The "Subsequent Report of Abandonment" (Form BLM 3160-5) must be submitted within 30 days after the actual plugging of the well bore, showing location of plugs, amount of cement in each, and amount of casing left in hole, and the current status of the surface restoration.

### **Daily Activity Report**

### Format For Sundry FEDERAL 14-19-6-21 12/1/2009 To 4/28/2010

### 1/19/2010 Day: 1

Completion

Rigless on 1/19/2010 - Ran CBL & shot 1st stage. - Install 5m frac head. NU 6" 5K Cameron BOP. RU H/O truck & pressure test casing, blind rams, frac head, csg & casing valves to 4500 psi. RU Perforators LLC WLT w/ mast & run CBL under pressure. WLTD @ 7577' & cement top @ 470'. Perforate stage #1, K4 sds @ 7468-70' & 7344-50' w/ 3 1/8" Port plug guns ( 11 gram .36" EH 16.82" pen) w/ 3 spf for total of 24 shots. 177 BWTR. SWIFN.

Daily Cost: \$0

Cumulative Cost: \$12,828

### 1/25/2010 Day: 2

Completion

Rigless on 1/25/2010 - Frac well. Flow well back. 3660 BWTR. - RU BJ Services. Frac K4 sds as shown in stimulation report. 945 BWTR. - RU PSI wireline & crane. Set CBP @ 7290'. Perf K4/K3 as shown in perforation report. RU BJ Services. Frac K3/K4 sds as shown in stimulation report. 2566 BWTR. - RU PSI wireline & crane. Set CBP @ 7100'. Perf K2 sds as shown in perforation report. RU BJ Services. Frac K2 sds as shown in stimulation report. 4060 BWTR. - RU PSI wireline & crane. Set CBP @ 6980'. Perf K1 sds as shown in perforation report. RU BJ Services. Frac K1 sds as shown in stimulation report. RD BJ Services & PSI wireline. Open well to pit for immediate flowback @ approx. 3 bpm. Well flowed for 11 hrs & died. Recovered 1485 bbls. Trace of oil. No show of sand. SWIFN. 3660 BWTR.

Daily Cost: \$0

Cumulative Cost: \$188,738

#### 1/28/2010 Day: 3

Completion

Leed #731 on 1/28/2010 - MIRU Leed #731. ND Cameron BOP. NU Schaeffer BOP. PU 148 jts tbg. SWIFN. - MIRU Leed #731. Thaw well w/ hotoiler. 100 psi on well. Bleed off well. ND Cameron BOP & 5m frac head. NU 3m production head & Schaeffer BOP. RIH w/ 4 3/4" chomp bit, bit sub & 148 jtsnew 2 7/8" tbg. from pipe racks (tallying & drifting). SWIFN. 3660 BWTR.

Daily Cost: \$0

Cumulative Cost: \$229,878

#### 1/29/2010 Day: 4

Completion

Leed #731 on 1/29/2010 - DU CBPs. - Thaw well w/ hotoiler. 25 psi on well. Bleed off well. Cont. RIH w/ tbg. Tag CBP @ 6980'. RU powerswivel. DU CBP in 10 min. Cont. RIH w/tbg. Tag CBP @ 7100'. DU CBP in 13 min. Cont. RIH w/ tbg. Tag fill @ 7160'. C/O to CBP @ 7290'. DU CBP in 10 min. Cont. RIH w/ tbg. fill @ 7500'. C/O to 7556'. Circulate well clean. Pull up to 7490'. SWIFN.

Daily Cost: \$0

Cumulative Cost: \$235,703

#### 1/30/2010 Day: 5

Completion

Leed #731 on 1/30/2010 - C/O to PBTD. Circulate well clean. Pull up to 7558'. Swab for

cleanup. SWIFN. 3480 BWTR. - 0 psi on well. C/O to PBTD @ 7623'. Circulate well clean. Pull up to 7558'. RIH w/ swab. SFL @ 100'. Made 17 runs. Recovered 160 bbls. Trace of sand. No oil. EFL @ 2400'. RD swab. SWIFN. 3480 BWTR.

Daily Cost: \$0

Cumulative Cost: \$241,144

### 2/1/2010 Day: 6

Completion

Leed #731 on 2/1/2010 - Round trip tbg. ND BOP. Set TAC @ 7442' w/ 17,000# tension. NU wellhead. X-over for rods. Flush tbg. w/ 60 bbls water. RIH w/ partial rod string. SWIFN. 3540 BWTR. - Thaw well w/ hotoiler. Csg. @ 125 psi, tbg. @ 25 psi. Bleed off well. RIH w/ tbg. Tag PBTD @ 7623'. Circulate well clean. POOH w/ tbg. LD BHA. RIH w/ 2 7/8" notched collar, 1 jt 2 7/8" tbg., PSN, 1 jt 2 7/8" tbg., 5 1/2" TAC, 236 jts 2 7/8" tbg. ND BOP. Set TAC @ 7442' w/ 17,000# tension. NU wellhead. X-over for rods. Flush tbg. w/ 60 bbls water. RIH w/ pump, 6- 1 1/2" weight bars, 60- 3/4" guided rods. SWIFN. 3540 BWTR.

Daily Cost: \$0

Cumulative Cost: \$247,239

### 2/2/2010 Day: 7

Completion

Leed #731 on 2/2/2010 - RIH w/ rods. PWOP @ 1:00 p.m. 168" stroke length, 4 spm. 3540 BWTR. Final Report. - Thaw well w/ hotoiler. Cont. RIH w/ rods. Seat pump. Stroke test to 800 psi w/ rig. Good pump action. RU pumping unit. Hang off rods. RD. Put well on production @ 1:00 p.m. 168" stroke length, 4 spm. Final Report. 3540 BWTR. **Finalized** 

**Daily Cost:** \$0

Cumulative Cost: \$285,202

## **Daily Activity Report**

## Format For Sundry FEDERAL 14-19-6-21 11/1/2009 To 3/28/2010

#### FEDERAL 14-19-6-21

**Waiting on Cement** 

**Date:** 12/19/2009

Ross #21 at 540. Days Since Spud - They hit a trace of wtr @ 130' - Class G+2% CaCl+1/4#sk cello flake returned 7 bbls to pit. - Graigs Roustabout Rig # 4 Spud the Federal 14-19-6-21 on 12/21/09 @ 10:00 AM to a TD of 540' - BLM & State was notified of the spud - On 12/21/09 ran 85/8" surface casing ( Guide shoe shoe jt, Baffle plate, 11 jts set A 540.44' KB ) - On 12/22/09 Cemented 85/8" surface casing with 256 sks mixed @ 15.8 ppg & 1.17 yeild

Daily Cost: \$0

Cumulative Cost: \$79,711

## FEDERAL 14-19-6-21

Rigging down

**Date:** 12/25/2009

Ross #21 at 540. 0 Days Since Spud - Rig down & get ready for trucks

Daily Cost: \$0

**Cumulative Cost:** \$80,061

## FEDERAL 14-19-6-21

Rigging down

**Date:** 12/26/2009

Ross #21 at 540. 0 Days Since Spud - Rig down & get ready to move the rig to the Federal 14

19 6-21

Daily Cost: \$0

**Cumulative Cost:** \$80,411

## FEDERAL 14-19-6-21

Drill 7 7/8" hole with salt water

**Date:** 12/27/2009

Ross #21 at 3601. 2 Days Since Spud - Move rig to the federal 14-19-6-21 on 12/26/09 - Set rig in & rig up - Nipple up bops - Test upper kelly valve & Dart valve & Saftey valve & Pipe rams & Inside valve & HCR to 250psi low & - 3000 psi High & test Annular 250 low & 2500 high & Test Blind ram & Kill line & Ckoke line & Manifol - d & Ou side manifold valves to 250 psi low & 3000 psi high & Casing to 1500 psi - Load pipe on racks & Strap - MU Bit & Mtr & TIH Tag cmt @ 473' - Drill 77/8 hole w/ 2% KCL to 581' - Survey @ 547' 1.5 deg - Drill 77/8 hole w/ 2% KCL to 1065' - Survey @ 1017' 3 deg - Drill 77/8 hole w/ 2% KCL to 1247' - Drill 7 7/8" hole with 2 % Kcl to a depth of 1337' - Deviation Survey @ 1292= 2.5 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 1654' - Deviation Survey @ 1609 = 2.75 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 1972' - Deviation Survey @ 1926'= 2 degrees - Drill 7 7/8" hole with 2 % Kcl to a depth of 2469' - Deviation Survey @ 2421'= 2 degrees, Well Flowing 10 gal/ min - Drill 7 7/8" hole with 2 % Kcl to a depth of 2967' - Deviation Survey @ 2918'=1.75 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 3465' - Deviation Surve @ 3417= 2 degrees - Drill 7 7/8" hole with 2 % Kcl to a depth of 3601' - Move rig to the federal 14-19-6-21 on 12/26/09 - Set rig in & rig up - Nipple up bops - Test upper kelly valve & Dart valve & Saftey valve & Pipe rams & Inside valve & HCR to 250psi low & - 3000 psi High & test Annular 250 low & 2500 high & Test Blind ram & Kill line & Ckoke line & Manifol - d & Ou side manifold valves to 250 psi low & 3000 psi high & Casing to 1500 psi - Load pipe on racks & Strap - MU Bit & Mtr & TIH Tag cmt @ 473' - Drill 77/8 hole w/ 2% KCL to 581' - Survey @ 547' 1.5 deg - Drill 77/8 hole w/ 2% KCL to 1065' - Survey @ 1017' 3 deg - Drill 77/8 hole w/ 2% KCL to 1247' - Drill 7 7/8" hole with 2 % Kcl to a depth of 1337' - Deviation Survey @

1292= 2.5 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 1654' - Deviation Survey @ 1609 = 2.75 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 1972' - Deviation Survey @ 1926'= 2 degrees - Drill 7 7/8" hole with 2 % Kcl to a depth of 2469' - Deviation Survey @ 2421'= 2 degrees, Well Flowing 10 gal/ min - Drill 7 7/8" hole with 2 % Kcl to a depth of 2967' - Deviation Survey @ 2918'=1.75 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 3465' - Deviation Surve @ 3417= 2 degrees - Drill 7 7/8" hole with 2 % Kcl to a depth of 3601'

Daily Cost: \$0

Cumulative Cost: \$129,727

### FEDERAL 14-19-6-21

## Drill 7 7/8" hole with salt water

Date: 12/28/2009

Capstar #328 at 5241. 3 Days Since Spud - Deviation Survey @ 4911'=.5 degree - Drill 7 7/8" hole with 2% Kcl to a depth of 5241' - Drill 7 7/8" hole with 2% Kcl to a depth of 3965' - Deviation Survey @ 3918'=2 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 4463' - No H2S in last 24 hours, well flowing 12 gpm - Deviation Survey @ 4416'=3 degrees - Drill 7 7/8" hole with 2% Kcl to a depth of 4959'

Daily Cost: \$0

**Cumulative Cost:** \$173,607

## FEDERAL 14-19-6-21

TIH

**Date:** 12/29/2009

Capstar #328 at 6082. 4 Days Since Spud - Drill 7 7/8" hole with 2% Kcl to a depth of 5910' - Rig Service, Function Test BOP and Crownomatic - Drill 7 7/8" hole with 2% Kcl to a depth of 6082' - Circulate, Raise mud wt. to 9.0# and Check for flow=No Flow - TOOH for bit, Pull 3 jts,take Survey @ 5917,check flow and well flowing TIH - TOOH for bit, No flow - Change out bits, - TIH with bit # 2 - No H2S in last 24 hours - Circulate & raise mud wt. to 9.2+, flow check=No Flow

Daily Cost: \$0

**Cumulative Cost:** \$199,626

### FEDERAL 14-19-6-21

Drill 7 7/8" hole with salt water

**Date:** 12/30/2009

Capstar #328 at 7223. 5 Days Since Spud - Drill 7 7/8" hole with 2% Kcl to a depth of 7223' - Rig Service , Chech crownomatic and BOP - Drill 7 7/8" hole with 2 % Kcl to a depth of 6453' - Finish TIH, NO Fill - No H2S in last 24 hours.

Daily Cost: \$0

Cumulative Cost: \$251,380

#### FEDERAL 14-19-6-21

Circulate & Condition Hole

**Date:** 1/1/2010

Capstar #328 at 7670. 6 Days Since Spud - Bring mud wt up to 9 ppg for bit trip - Circ & Cond mud to give logging truck on Rig # 29 a little more time - Drill 77/8 hole w/ 2%KCL to 7670' - TIH & Wash 5 jts to btm - MU New bit & mud mtr - TOOH for bit - Drill 77/8 hole w/ 2%KCL to 7233'

Daily Cost: \$0

Cumulative Cost: \$278,566

## FEDERAL 14-19-6-21

Rigging down

**Date:** 1/2/2010

Capstar #328 at 7670. 8 Days Since Spud - Log well with Weatherford ( Caliper log-

Compensated Photo Density Compensated Duel Neutron log- - Nipple down & set 5.5 csq slips w/110,000#s - Circ & Cond & Bring wt up to 9.1 ppg for the laydown - Mixed @ 11 ppg & 3.53 yeild & 250 sks of Tail cmt 50:50:2+.3%kcl+.25#/skcf+.4%cd32+.2%r3+.5%ec1 - RU BJ & Hold saftey mtg & pump 654 sks of lead cmt PLII+10%gel+.5sms+5#/skks+5#skcse+3% KCL+.5#/skcf - Circ & Cond for cmt job & Thaw BJ & Wtr trucks out - & Set 5.5 casing @ 7670.09' - RU & Run 175 jts of 5.5 17# J55 LT&C casing Top of the Float 7622' Tagged up @ 7604' washed to 7670 - Dual Laterollog Resitivty log-Compact Triple Combo- Quicklook Log -Log well with Weatherford ( Caliper log-Compensated Photo Density Compensated Duel Neutron log- - LDDP & BHA - Circ & Cond & Bring wt up to 9.1 ppg for the laydown - Release rig @ 2:00 PM on 1/2/2010 - Clean mud pit & Rig Down - Nipple down & set 5.5 csg slips w/110,000#s - Mixed @ 14.4 ppg & 1.25 yield - Mixed @ 11 ppg & 3.53 yeild & 250 sks of Tail cmt 50:50:2+.3%kcl+.25#/skcf+.4%cd32+.2%r3+.5%ec1 - RU BJ & Hold saftey mtg & pump 654 sks of lead cmt PLII+10%gel+.5sms+5#/skks+5#skcse+3%KCL+.5#/skcf - Circ & Cond for cmt job & Thaw BJ & Wtr trucks out - Dual Laterollog Resitivty log-Compact Triple Combo- Quicklook Log - RU & Run 175 jts of 5.5 17# J55 LT&C casing Top of the Float 7622' Tagged up @ 7604' washed to 7670 - Mixed @ 14.4 ppg & 1.25 yield - & Set 5.5 casing @ 7670.09' - Release rig @ 2:00 PM on 1/2/2010 - Clean mud pit & Rig Down - LDDP & BHA

Finalized
